API Automation — all 88 tools: Licensed vs Free to use

A scan of every tool in the API Automation gallery, classified by whether it needs a **paid/commercial dependency** to operate or runs entirely on **free, open-source and in-house** components.

How to read this

• **Licensed** = the tool needs a **paid, commercial dependency** to do its job — the **Anthropic Claude API** (usage-metered), or an **external LLM provider account** (OpenAI / Azure OpenAI / Gemini). You pay a third party for it to run.

• **Free to use** = the tool runs on the platform's own in-house logic plus **permissive open-source** engines (MIT / Apache-2.0 / ISC / BSD). No separate paid license is needed.

> *Note: the JBSIntelliQE **platform itself** is a commercial product, so every tool ships under that license. This table is strictly about each tool's **third-party runtime dependency** — whether it additionally needs a paid AI/LLM service, or not.*

Summary

Classification	Count	What it means
Licensed (paid AI/LLM dependency)	**20**	Needs the Claude API or an external LLM provider to run
Free to use (open-source + in-house)	**68**	No paid dependency — permissive OSS + our own code
Total	**88**	

---

1. Generate & author

#	Tool	Classification	Basis
1	AI coworker (Atto)	Licensed	Anthropic Claude API
2	Autopilot (autonomous loop)	Licensed	Anthropic Claude API
3	Story-driven generation	Licensed	Anthropic Claude API
4	Multimodal inputs	Licensed	Anthropic Claude API (vision)
5	Author in plain English	Licensed	Anthropic Claude API
6	Chat-to-test	Licensed	Anthropic Claude API
7	Coverage-guided generation	Licensed	Anthropic Claude API
8	Stateful / white-box generation	Licensed	Anthropic Claude API
9	Model-based generation	Licensed	Anthropic Claude API
10	Synthetic data factory	Licensed	Anthropic Claude API
11	Flow builder	Free to use	In-house logic
12	Step groups library	Free to use	In-house logic
13	Unified cross-layer test	Free to use	In-house + Playwright (Apache-2.0), DB drivers (MIT)
14	Autonomous maintenance	Licensed	Anthropic Claude API

2. Security & authorization

#	Tool	Classification	Basis
15	Security scan	Licensed	Anthropic Claude API (+ in-house)
16	OWASP API Top-10	Free to use	In-house ruleset

#	Tool	Classification	Basis
17	Fuzz / property test	Free to use	In-house
18	Sequence fuzzing	Free to use	In-house
19	Authorization (BOLA/BFLA)	Free to use	In-house
20	Deep authorization & data exposure	Licensed	Anthropic Claude API
21	Assertion strength (mutation)	Free to use	In-house
22	Semantic assertion	Licensed	Anthropic Claude API (LLM judge)
23	Data classification (PII/shadow)	Licensed	Anthropic Claude API
24	OpenAPI security audit	Free to use	ajv (MIT), yaml (ISC)
25	OAuth & secrets	Free to use	Cloud SDKs (Apache-2.0/MIT); your own cloud account
26	Access control (RBAC/SSO/SCIM)	Free to use	jsonwebtoken (MIT)

3. Performance & resilience

#	Tool	Classification	Basis
27	Load test	Free to use	In-house engine, undici/axios (MIT)
28	Load profile & SLA	Free to use	In-house
29	Geo / distributed load	Free to use	In-house
30	Distributed cloud load	Free to use	In-house
31	Distributed load ramp	Free to use	In-house
32	Chaos / resilience	Free to use	In-house

4. Contracts & virtualization

#	Tool	Classification	Basis
33	Contract validation	Free to use	ajv (MIT), yaml (ISC)
34	Contract drift	Free to use	In-house, ajv (MIT)
35	Regression baselines	Free to use	In-house
36	Breaking-change gate (spec diff)	Free to use	In-house, ajv (MIT)
37	Record & replay	Free to use	In-house
38	Pact broker	Free to use	In-house (Pact open spec)
39	AsyncAPI contracts	Free to use	In-house, ajv (MIT)
40	Service virtualization	Free to use	In-house, express (MIT)
41	Hosted mock server	Free to use	express (MIT)
42	Contract proxy	Free to use	express / undici (MIT)

5. Coverage & intelligence

#	Tool	Classification	Basis
43	Test coverage	Free to use	In-house
44	Traffic coverage gaps	Free to use	In-house
45	Test intelligence (flaky/quarantine)	Free to use	In-house
46	Change impact	Free to use	In-house
47	Suite optimizer	Free to use	In-house
48	Semantic self-healing	Licensed	Anthropic Claude API
49	Data-correctness verify	Free to use	DB drivers (MIT)

6. Protocols, data & AI

#	Tool	Classification	Basis
50	Async & streaming (WS/SSE)	Free to use	In-house (native WebSocket/SSE)
51	Events & gRPC	Free to use	kafkajs (MIT), grpc-js (Apache-2.0)
52	Callback verification	Free to use	express (MIT)
53	Data-driven testing	Free to use	xlsx / SheetJS (Apache-2.0)
54	Test data profiles	Free to use	In-house
55	Database validation	Free to use	mssql / mysql2 / pg (MIT)
56	Traffic capture	Free to use	In-house
57	Browser recorder	Free to use	In-house
58	Trace correlation	Free to use	axios (MIT); Jaeger/Zipkin REST
59	LLM providers	Licensed	External LLM provider account (OpenAI/Azure/Gemini)
60	MCP server	Free to use	In-house (MCP open spec)
61	AI / LLM & MCP testing	Licensed	Anthropic Claude API
62	LLM eval harness	Licensed	Anthropic Claude API

7. Governance & compliance

#	Tool	Classification	Basis
63	API governance	Free to use	In-house rules
64	Governance lint	Free to use	In-house
65	Compliance packs (PCI/HIPAA/GDPR)	Free to use	In-house
66	AI-era compliance (EU AI Act/DORA)	Free to use	In-house
67	AI cost / FinOps	Free to use	In-house
68	On-prem / air-gapped	Free to use	In-house
69	Full-code & Monitoring-as-Code	Free to use	In-house generators (generated k6 project is AGPL-3.0, in your repo)

8. Execution, CI & lifecycle

#	Tool	Classification	Basis
70	Schedules & webhooks	Free to use	In-house, nodemailer (MIT)
71	CI / GitHub Action	Free to use	@octokit/rest (MIT)
72	Release gate	Free to use	In-house
73	Parallel run queue	Free to use	In-house
74	Cloud browser lab	Free to use	Playwright (Apache-2.0), axe-core (MPL-2.0), pixelmatch (ISC)
75	API + UI hybrid test	Free to use	Playwright (Apache-2.0)
76	Monitoring	Free to use	In-house
77	Public status page	Free to use	In-house
78	Failure → fix workflow	Licensed	Anthropic Claude API
79	Bug report	Free to use	In-house + tracker clients (MIT)
80	Remediation PR	Free to use	@octokit/rest, @gitbeaker/rest (MIT)
81	Git-synced tests	Free to use	@octokit/rest, @gitbeaker/rest (MIT)
82	Evidence export	Free to use	pdf-lib / archiver / jszip (MIT)
83	Audit log	Free to use	In-house, mssql (MIT)

#	Tool	Classification	Basis
84	Traceability matrix	Free to use	In-house
85	Test management	Free to use	In-house
86	TM connectors (TestRail/Xray/Zephyr/qTest)	Free to use	In-house REST clients, axios (MIT)
87	Approvals	Free to use	In-house
88	Collaboration	Free to use	In-house

Notes

• The 20 **Licensed** tools are the AI-powered ones — they call the **Anthropic Claude API** (metered/commercial), except **LLM providers** (#59), which needs your own **OpenAI/Azure/Gemini** account. Turn those off and the tool cannot do its AI work.

• The **Free to use** engines are all permissive (MIT / Apache-2.0 / ISC / BSD) with only two weak-copyleft items in the stack — **axe-core (MPL-2.0)** behind the cloud browser lab and **JSZip (dual MIT/GPL → elect MIT)** behind evidence export. Neither restricts commercial use.

• **No GPL/AGPL is bundled.** The one AGPL mention — **k6** — only applies to the *code the Full-code export generates for your repo*, not to the platform itself.

• Cross-reference: a fuller per-tool engine + license breakdown is in `api-automation-tool-licenses.md`.
